Write a program using choice to check
Case 1: Given string is palindrome or not
Case 2: Given number is palindrome or not
Sample Input:
Case = 1
String = MADAM
Sample Output:
Palindrome

Testcases:
1. MONEY
2. 5678765
3. MALAY12321ALAM
4. MALAYALAM
5. 1234.4321

Your Code

```
1 import java.util.Scanner;
2 public class Main{
3     public static void main(String[] a:
4         Scanner sc = new Scanner(Syster
5         int choice = sc.nextInt();
6         sc.nextLine();
7         String input = sc.nextLine();
8         String rev = "";
9         for(int i = input.length() - 1,
10             rev = rev + input.charAt(i)
11     }
12     switch (choice){
```

```
13         case 1:
14             if (input.equals(rev))
15                 System.out.println
16             else
17                 System.out.println
18             break;
19         case 2:
20             if (input.equals(rev))
21                 System.out.println
22             else
23                 System.out.println
24             break;
25         default:
26             System.out.println("Inv
27     }
28 }
29 }
```

Output

Palindrome

Write a program to print the first n perfect numbers. (Hint Perfect number means a positive integer that is equal to the sum of its proper divisors)

Sample Input:

N = 3

Sample Output:

First 3 perfect numbers are: 6 , 28 , 496

Testcases:

1. N = 0
2. N = 5
3. N = -2
4. N = -5
5. N = 0.2

Your Code

```
1 import java.util.Scanner;
2 public class Main{
3     public static void main(String[] args) {
4         Scanner sc = new Scanner(System.in);
5         double input = sc.nextDouble();
6         if (input <= 0 || input != (int) input) {
7             System.out.println("Invalid input");
8             return;
9         }
10        int n = (int) input;
11        if (n == 0) {
12            System.out.println("Invalid input");
13        }
14    }
15 }
```

```
13     }
14     int count = 0;
15     int num = 2;
16     System.out.println("First " + n + " perfect numbers are:");
17     while (count < n) {
18         int sum = 0;
19         for (int i = 1; i <= num / 2; i++) {
20             if (num % i == 0) {
21                 sum += i;
22             }
23         }
24         if (sum == num) {
25             if (count > 0) {
26                 System.out.print(", ");
27             }
28             System.out.print(num);
29             count++;
30         }
31         num++;
32     }
33 }
34 }
```

Output

```
First 3 perfect number are:
6, 28, 496
```

Level 2 — Medium**(M) Nth Max** — Array**✓ Submitted**

Write a Program to Find the Nth Largest Number in a array.

Sample Input:

List : {14, 67, 48, 23, 5, 62}

N = 4

Sample Output:

4th Largest number: 23

Testcases:

1. N = 0
2. N = -5
3. N = 1
4. N = M
5. N = %

Your Code

```
1 import java.util.Scanner;
2 public class Main{
3     public static void main(String[] a:
4         Scanner sc = new Scanner(System
5         int m = sc.nextInt();
6         int[] a = new int[m];
7         for (int i = 0; i < m; i++){
8             a[i] = sc.nextInt();
9         }
10        int n = sc.nextInt();
11        if (n <= 0 || n > m) {
12            System.out.println("Invalid
13            return;
```

```
14     }
15     for (int i = 0; i < m - 1; i++)
16         for (int j = i + 1; j < m; j++)
17             if (a[i] > a[j]){
18                 int temp = a[i];
19                 a[i] = a[j];
20                 a[j] = temp;
21             }
22     }
23 }
24     int largest = a[m - n];
25     System.out.println(n + "th largest number is: " + largest);
26 }
27 }
28
29
```

Output

```
4th largest number: 23
```
